

FOCUSING FOREGROUND AND BACKGROUND AT THE SAME TIME

Description	
<p>A split diopter is standard diopter element is precision-cut in half and mounted in the ring. It creates a shot with two planes of focus rather than one. Makes a sharp image of the foreground (captured through the diopter) and background (captured through the uncovered half of your camera's lens).</p>	
Key Feature	
<ul style="list-style-type: none"> • Can be used in matte boxes. • Simultaneous focus on close-up and background. • No exposure compensation. • Broadband coating 	
USP	
<ul style="list-style-type: none"> • Structural integrity (special mounting technique). • Consistent long-term performance. • Comparatively low weight and thin. 	
Application	
<p>Look of deep focus without stepping down iris. Highlights the relationship of main subject with an object in the background without stepping down the aperture. Ideal for shots in the dark or indoor, when getting more light is difficult. Split screen is also popular for storytelling. To attract attention of the viewer to an object in the background, while the main scene remains in the foreground. Can be used to provoke a certain mood unconsciously for the viewer.</p>	
Difference to Gen1	
<ul style="list-style-type: none"> • Better AR-Coating (BBAR) • Higher transmission • More durable
