

FULL SPECTRUM NEUTRAL GRAY DENSITY FILTER  
IN 10 DEDICATED STEPS

Description	
<p>Line of 10 color-neutral Full Spectrum ND filters in one stop steps. Consistent filtering of full light spectrum from IR throughout the visible spectrum down to UV (350-1.00nm). Eliminates IR pollution with all available sensors and cameras without any color cast.</p> <p>A truly neutral ND that transmits a similar amount of light from the near UV through the visible and into the near IR. This full spectrum ND filter is made specifically for the critical color standards of 4K, 6K, and 8K resolution cameras. This is of particular importance in post-production color grading because it allows the colorist to grade all the shots the same, filtered, or unfiltered. RHODium FSND resolve even the finest detail and produce images free from distortion. By encapsulating the interlayer between the glass, rather than on the surface, RHODium FSND filters are better protected from abrasions and other rigors of production.</p>	
Key Feature	
<ul style="list-style-type: none"> <li>• Eliminate IR pollution for digital sensors.</li> <li>• No blue shift even for short focal length.</li> <li>• Color and density consistency from filter to filter.</li> <li>• Available in 10 stops from 0.3 – 3.0.</li> </ul>	
USP	
Color-neutral – Full spectrum ND 350-1000nm.	
Application	
Reduces the amount of light entering the sensor. Gives more exposure control allowing higher contrast and creative shots like reduced depth of field and/or motion blurs.
